

As part of their work on Iceland, children learnt about the eruption of the volcano, Eyjafjallajökull. They discussed ways in which the story was reported around the world, before writing their own version as a newspaper report. Fact sheets and planning time were provided.

# Volcano Destruction!

The volcano Eyjafjallajökull erupted on the 14<sup>th</sup> of April and the 20<sup>th</sup> of March 2010. It caused an ash cloud over Europe and ~~decline~~ all of the planes from flying.

Seventy five children had to go to a place so they didn't get affected by the ash cloud and people had to wear gas masks to breathe with.

Some of the people say that it wasn't really scary watching the lava bursting from the volcano and others say they loved watching the glowing red lava flowing ~~at~~ down the volcano.

The Two of the earth's plates  
shook and the magma  
came between them and  
exploded into the air.

In Europe, there was an ash  
cloud that caused most planes  
to decline and to fly over  
to Iceland a person called  
Steve <sup>he</sup> said "it was herendous  
we had to wait two days.
